critical or high

What matters most on typesafe.ai

typesafe.ai is technically sound. The crawl found no HTTP errors, broken internal links or redirect chains; HTTP redirects to HTTPS, www redirects to the bare domain, and a missing page returns a real 404. The overall score of 83 is held back by content and discoverability rather than by technical faults.

The main gap is the blog. The /blog index returned no text even after JavaScript rendering and links to nothing, so two posts (/blog/antibenchmaxxing and the Diogo Almeida founders post), the /blog index itself and two legal pages have no internal links from any crawled page (JEV-005). The two short posts have 54 and 48 words of main text (JEV-007), and Jev suggests rewriting them (JEV-008, flagged to verify).

Jev judged the homepage and manifesto light on visible evidence of expertise (JEV-002, trust 0.36, one answer to verify). The homepage does link its 193.6x and 444.6x claims to the launch post with a (proof) link, so this is about named people, sources and accountability on the pages themselves, not a missing citation. The cheapest structural fix is Organization and WebSite structured data on the homepage (JEV-001).

Impact 66 · About a day · 2 pages

JEV-003 · P2 rule

Core Web Vitals not in the good range for real mobile users

Impact 63 · Several days · 1 page

What is working

- Crawl and indexing scores 100: no HTTP errors, no broken internal links, no redirect chains, correct 404 handling.
- Jev judged the homepage offer clear: value proposition 0.98, confidence 0.94.
- The site is focused on one topic set (Jev topical focus 0.93, flagged to verify).
- Real Chrome users see good Core Web Vitals on the launch post and the manifesto, and Lighthouse SEO scores 100 on all three measured pages.
- All 10 AI crawlers checked, including GPTBot, ClaudeBot and PerplexityBot, are allowed by robots.txt.

What is holding the site back

- The empty /blog index leaves two posts, the index and two legal pages without internal links (JEV-005).
- No structured data on the homepage, so the organisation is not described in machine-readable form (JEV-001).
- Homepage and manifesto show little evidence of expertise to Jev (JEV-002) and four pages read as generic (JEV-004).
- On mobile the homepage's real-user LCP is 2693 ms and CLS 0.11, both in the needs improvement band (JEV-003).
- All 13 pages share one meta description (JEV-012).

Plan

This week

- JEV-012 Write a distinct meta description for each page (hours)
- JEV-009 and JEV-015 Give each page one H1 that names its topic (hours)
- JEV-022 Link the terms page straight to /legal/privacy-policy and the privacy page to typesafe.ai/ (hours)
- JEV-013 Add a Referrer-Policy and a frame policy header (hours)

This month

- JEV-005 Turn /blog into a real index that links every post (about a day)
- JEV-001 Add Organization and WebSite JSON-LD to the homepage (about a day)
- JEV-007 and JEV-008 Expand or retire the two short posts (several days)
- JEV-003 Work through the mobile LCP and CLS opportunities on the homepage (several days)

This quarter

- JEV-002 Add named people, sources and accountability to the homepage and manifesto (about a day)
- JEV-004 and JEV-006 Add first-hand specifics and self-contained facts to the thin and generic pages (several days)
- JEV-014 Open each page with its main point in one or two sentences (hours)

After fixing the blog index, re-run this audit to confirm the orphans are linked. This audit used no Search Console, analytics or backlink data, so it says nothing about current rankings or traffic.

Written by: Claude, from the audit evidence.

A source finds, code decides, Jev judges, Claude writes

Each stage does only what it is good at. Anything a count, a status code or a string match can decide is decided by code. Jev, TypeSafe's System One model, answers narrow typed questions about meaning, with probabilities. Nothing is invented to fill a gap: missing data is shown as missing.

Who decides what

STAGE	OWNS	NEVER DOES
Code	Crawling, status codes, counts, duplicates, schema parsing, formulas, ranking	Guess at meaning
Jev	Page type, search intent, importance, helpfulness, specificity, trust, citability, title and meta fit, competing page pairs	Predict rankings or traffic, invent data, grant permission to act
PageSpeed	Chrome UX Report field data and Lighthouse lab scores	Stand in for every page or device
Claude	The summary and plan, citing action IDs	Add findings that the evidence does not show

Eight areas, one score

AREA	SCORE	WEIGHT	ACTIONS	HOW IT IS SCORED
Crawl and indexing	100	20	0	Rules only
On-page	81	15	9	Rules only
Content quality	61	20	4	70% Jev judgment (helpfulness, specificity, trust), 30% rules
Links and architecture	95	10	2	Rules only
Structured data and sharing	94	8	1	Rules only
AI search readiness	70	12	2	70% Jev judgment (citability, answer-first, entity clarity), 30% rules
Performance	82	10	3	50% Lighthouse mobile performance, 50% crawl observations
Security and trust	98	5	1	Rules only

PRIORITIES

What to fix first

Impact combines severity, how many pages are affected and how important Jev judged those pages to be. Effort is a planning estimate, not a quote.

Each dot is one action; labelled dots are fix-first or high impact. Colour shows priority.

ID	ACTION	PRIORITY	IMPACT	EFFORT	PAGES	BY
JEV-001	No structured data on the homepage	P2 Plan next	100	About a day	1	rule
JEV-002	Key pages show little evidence of expertise or trust	P2 Plan next	66	About a day	2	Jev
JEV-003	Core Web Vitals not in the good range for real mobile users	P2 Plan next	63	Several days	1	rule
JEV-004	Generic content that any competitor could publish	P2 Plan next	58	Several days	4	Jev
JEV-005	Sitemap pages with no internal links (orphans)	P2 Plan next	57	About a day	5	rule
JEV-006	Few self-contained, quotable facts	P2 Plan next	49	About a day	3	Jev
JEV-007	Pages with very little main content	P2 Plan next	49	Several days	3	rule
JEV-008	Pages Jev would rewrite, consolidate or remove	P2 Plan next	49	Several days	3	Jev
JEV-009	Pages without an H1 heading quick win	P2 Plan next	45	Hours	1	rule
JEV-010	Titles that do not describe the page well quick win	P2 Plan next	45	Hours	1	Jev

What the crawl found

From everything discovered to what Jev judged, then the pages laid out by clicks from the homepage. Bigger dots are pages Jev judged more important; the outer dashed ring holds pages that no crawled page links to.

How Jev reads the site

Site-level questions asked over the homepage and the list of page titles. Each card shows Jev's typed answer and the probability it gave each option.

How sure was Jev?

A Choice or Score answer is decisive at confidence 0.80 or above; a yes or no answer is decisive at P(yes) of 0.80 or more, or 0.20 or less. Everything else is marked for a human check and flagged on its action.

Where to invest

Each page placed by how important Jev judged it to the business and how good its content is (mean of helpfulness, specificity and trust). Pages in the shaded corner matter and are weak: improving them is likely to pay back first.

No page is both important (0.5 or more) and weak (below 0.5).

On-page 81

Title length. The 65 mark is a display convention, not a rule.

Main content words per page. The 150 mark is a warning sign, not a ranking factor.

Actions

Method, sources and limits

Formulas

Area score starts at 100 and subtracts, per finding, a severity amount (critical 25, high 12, medium 6, low 2, info 0) times (0.5 + 0.5 × share of pages affected). Site-wide findings count as full share. Content quality and AI search readiness blend 70% importance-weighted Jev judgments with 30% rules. Performance blends 50% Lighthouse mobile performance with 50% crawl observations.

Overall score is the weighted mean of scored areas (weights in the scorecard). Unsourced areas are left out, never counted as zero. A blocked site is capped at 20; a site without reliable HTTPS at 60.

Impact = severity weight (critical 10, high 6, medium 3, low 1) × (0.6 + 0.4 × reach) × (0.6 + 0.8 × highest Jev importance among affected pages), scaled so the largest is 100. **Priority:** P1 for critical, or high with impact 40 or more; P2 for impact 30 or more or any high; P3 otherwise. **Quick win:** impact 35 or more with effort of hours.

Jev

Model requested jev-latest, returned jev-1.13.0. 14 requests, 45168 input tokens, 0 failed, 0 skipped by the budget cap. Cost \$0.0019 at \$0.042 per million input tokens (output is free). Page text sent to Jev is capped at 6,000 characters. Jev answers are model judgments, not measurements; decisive does not mean correct.

Limits

- The crawl covered 15 URLs. Orphan and depth findings only see links on crawled pages.
- No Search Console, analytics, backlink or keyword data was used. Nothing here measures rankings, traffic or revenue.
- PageSpeed lab scores vary between runs. Field data exists only for sites with enough Chrome traffic.
- Rules marked heuristic are editorial conventions, not search engine requirements.
